PROFESSIONAL SUMMARY

Aspiring Data Analyst with hands-on technical expertise in Excel, SQL, Power BI, and Python, built through self-directed projects and structured coursework including the Google Data Analytics Professional Certificate and Microsoft PL-300. Skilled in data cleaning, exploratory data analysis (EDA), and building interactive dashboards using DAX and Power Query to turn raw datasets into clear business insights. Seeking an entry-level Data Analyst role to apply strong analytical and reporting skills to real business problems.

TECHNICAL SKILLS

Data & Programming: Python (Pandas, NumPy, Matplotlib, Seaborn), SQL (PostgreSQL, MySQL), Advanced Excel (VLOOKUP, INDEX/MATCH, Pivot Tables)

BI & Visualization: Power BI, Power Query, DAX, Interactive Dashboard Development, KPI Scorecards

Methodologies: Data Cleaning & Preprocessing, Exploratory Data Analysis (EDA), Customer Segmentation, Inventory Optimization, Business Reporting, Relational Data Modeling

TECHNICAL PROJECTS

Retail Sales & Inventory Analysis Dashboard

Power BI, SQL, Python

- Analyzed over 10,000 retail transaction records to evaluate revenue streams, seasonal sales trends, and inventory performance metrics.
- Formulated SQL queries using aggregate functions, joins, and Common Table Expressions (CTEs) to extract, merge, and structure segmented tables for reporting.
- Executed data cleaning and preprocessing in Python (Pandas, NumPy) to handle missing values, eliminate duplicates, and resolve structural anomalies.
- Designed a multi-page interactive Power BI dashboard tracking regional sales velocity, customer purchasing behavior, and high-margin product categories.
- Produced inventory optimization recommendations to align stocking levels with historical demand trends and reduce overstock risk.

Automated Web Scraping & Market Pricing Analysis

Python, BeautifulSoup

- Developed a Python web scraping tool using BeautifulSoup and Requests to collect competitor pricing, stock availability, and promotional data from e-commerce sites.
- Cleaned and processed scraped data with Pandas and NumPy, then conducted EDA to evaluate market-wide price distribution and variance.
- Built visualizations in Matplotlib and Seaborn to map pricing trends and communicate findings clearly.
- Identified pricing and positioning patterns that could inform margin optimization decisions.

CORE COMPETENCIES

- Analytical Problem Solving: Converting ambiguous business problems into structured SQL queries, data models, and quantitative analysis.
- Data Storytelling: Interpreting data models and translating insights into clear narratives for non-technical stakeholders.
- Cross-Functional Collaboration: Communicating effectively with business teams to identify data needs and target metrics.

EDUCATION

Bachelor of Science (B.Sc.) in Chemistry

Graduated 2023

Giridih College

CERTIFICATIONS & PROFESSIONAL TRAINING

- Data Analytics with Gen AI – PW (PhysicsWallah), April 2026
- Google Data Analytics Professional Certificate – Coursera
- Microsoft Certified: Power BI Data Analyst Associate (PL-300)
- Advanced SQL for Data Science
